

As I understand it there are lobbyist in Washington that wish to interfere with the Satellite Radio programing (HR 4026). In particular they don't like the instant weather and traffic reports in major markets. We as satellite radio subsbribes dictate what type of programming is desired and the carriers listen to those reuests. We pay a fee to subscribe to the type programming that we desire. How can others that won't offer what listeners want, dictate to Washington that is unfair. We are getting exactly what we want and we pay for it. Leave it alone and let others compete for the same market if they desire.
